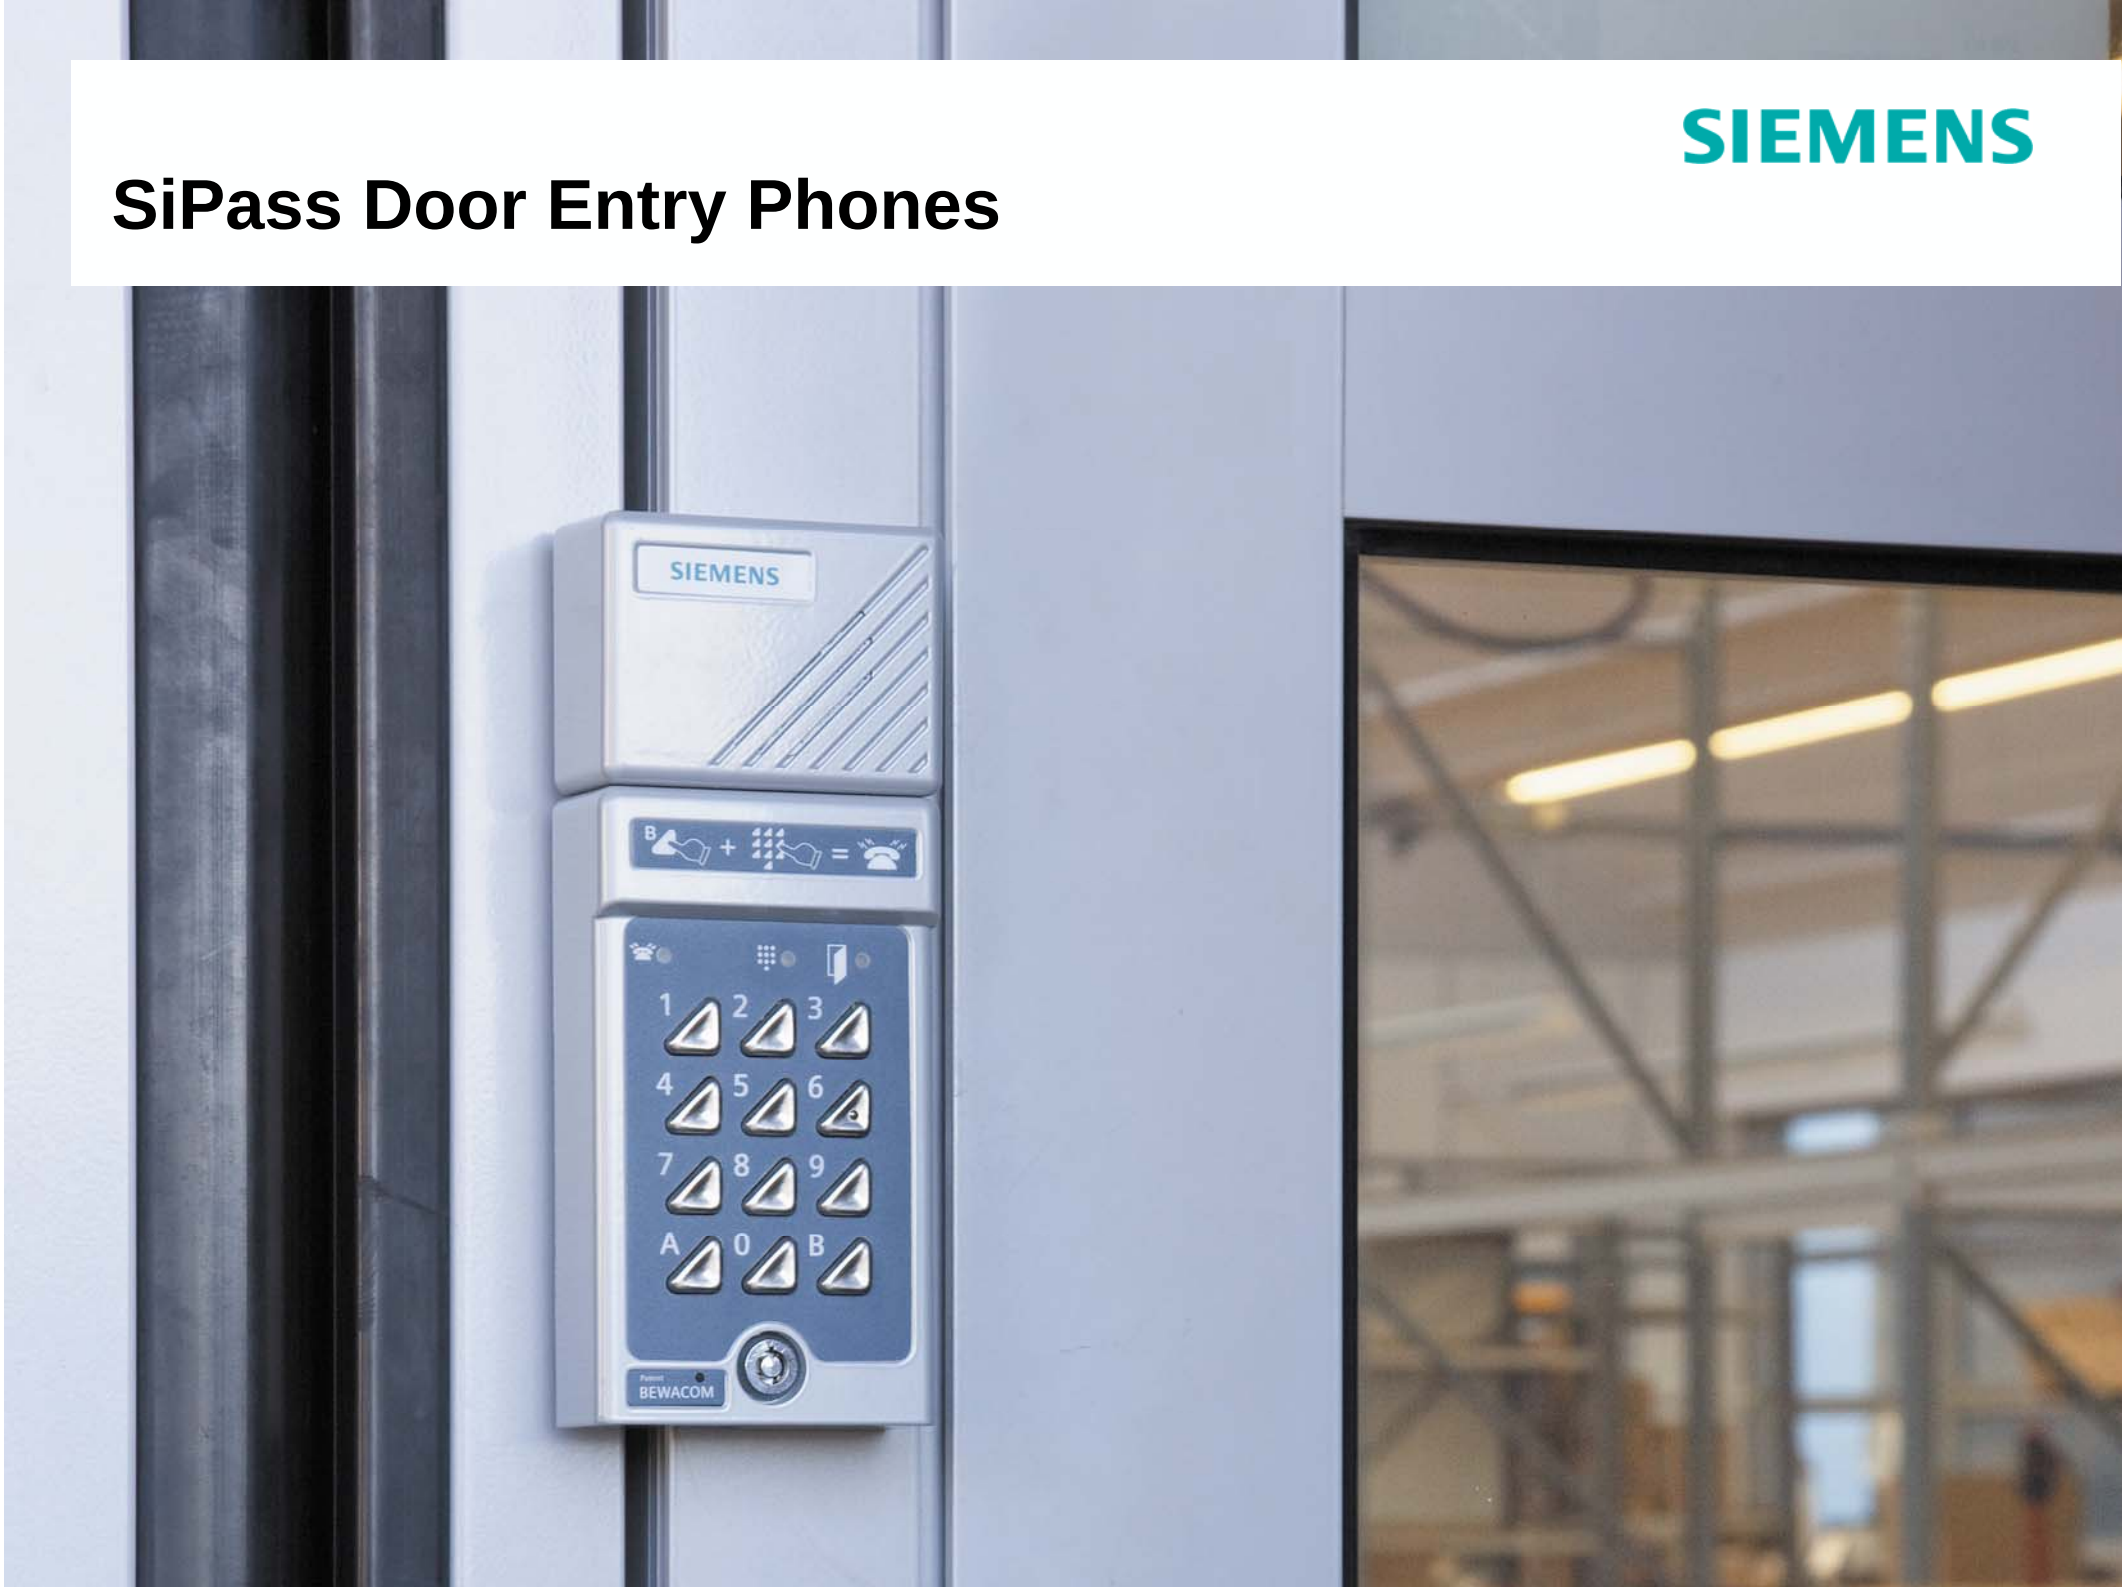
SIEMENS

SiPass Door Entry Phones



SiPass Door Entry Phones –
Convenient, cost-efficient and easy to install

SIEMENS

- SiPass Door Entry Phones simplify the lives of building owners, managers, employees, tenants, and visitors
- Ideal both for organizations that already have an access control system, as well as for organizations that don't.

SiPass Door Entry Phones –
For organizations with access control systems

SIEMENS

- When an access control system has been installed, non-cardholders are locked out.
- SiPass Door Entry Phones quickly and easily overcome the challenge of managing access for visitors and other non-cardholders
- Non-cardholders at the entrance simply call someone inside the building and can be granted access via the push of a button

SiPass Door Entry Phones –
For organizations without access control systems

SIEMENS

- Not only do SiPass Door Entry Phones manage visitor access in a very convenient way, they can also provide basic access control features
- Some models have an integrated codelock function that can be used by the residents or employees in the building

SiPass Door Entry Phones –
Two systems available

SIEMENS

- **SiPass Bewatel** is a very cost-efficient alternative for up to four extensions
- **SiPass Bewacom** connects directly to a company's internal phone system, so no separate wiring is required!

SiPass Bewatel –
For small companies or residential buildings

SiPass Bewatel is an entrance phone unit that is only slightly larger than conventional codelock panel and available for 1-4 extensions**.**

Target customer requirements:

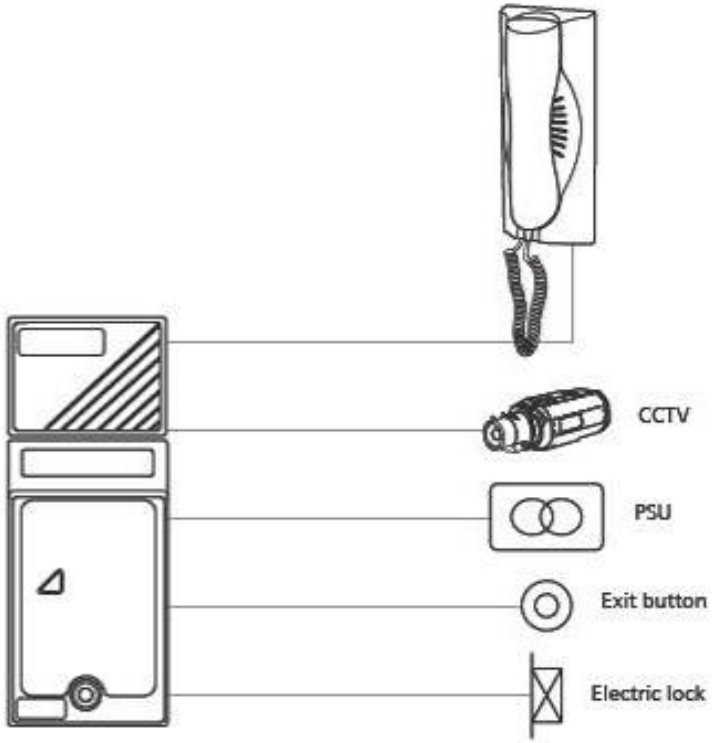
- Outdoor or heavy-duty use
- Excellent sound quality
- Ability to trigger CCTV recordings

Door entry phone for organizations without PABX

SiPass Bewatel –
How it works

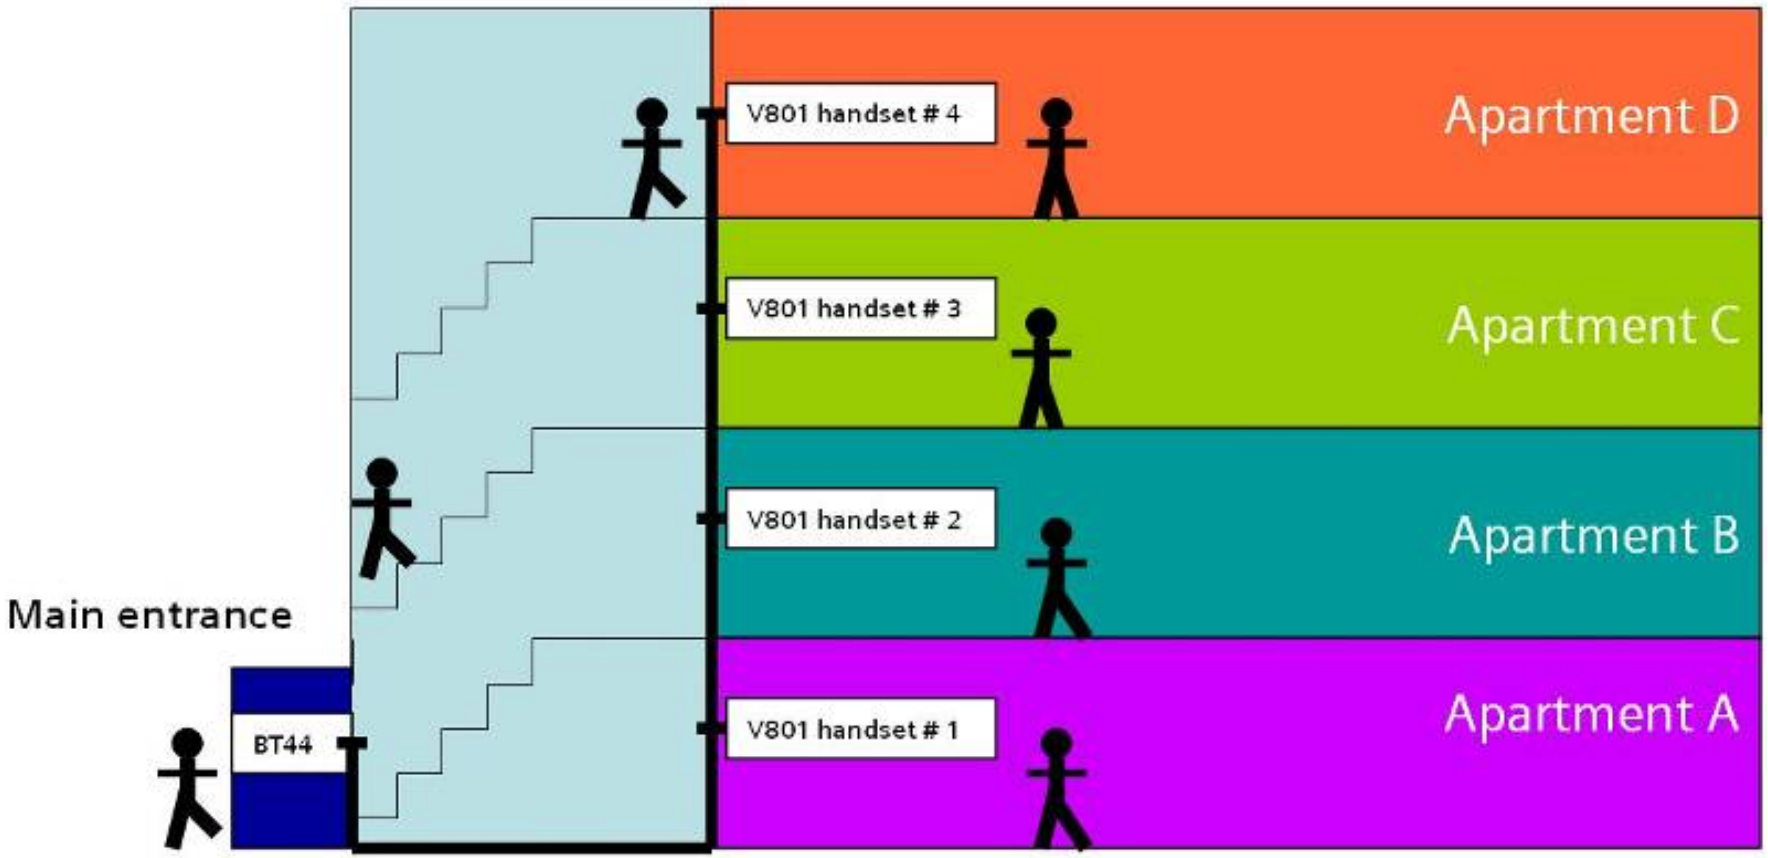
SIEMENS

- A door entry phone unit (BT41, BT44 or BTK41) is installed at the main entrance and up to four V801 telephone handsets at convenient locations inside the building
- When visitors arrive at the main door they simply press one of call buttons and the call goes through to one of the V801 handsets.
- The person at that extension then answers the call and if they want to allow the visitors into the building, they press “unlock” button on the V801 and the visitors are able to open the door.



SiPass Bewatel –
Residential application example

SIEMENS



SiPass Bewacom –
For companies with internal phone systems

SiPass Bewacom is a door entry phone that connects directly to PABX internal phone systems, which makes it very cost-efficient.

Target customer requirements:

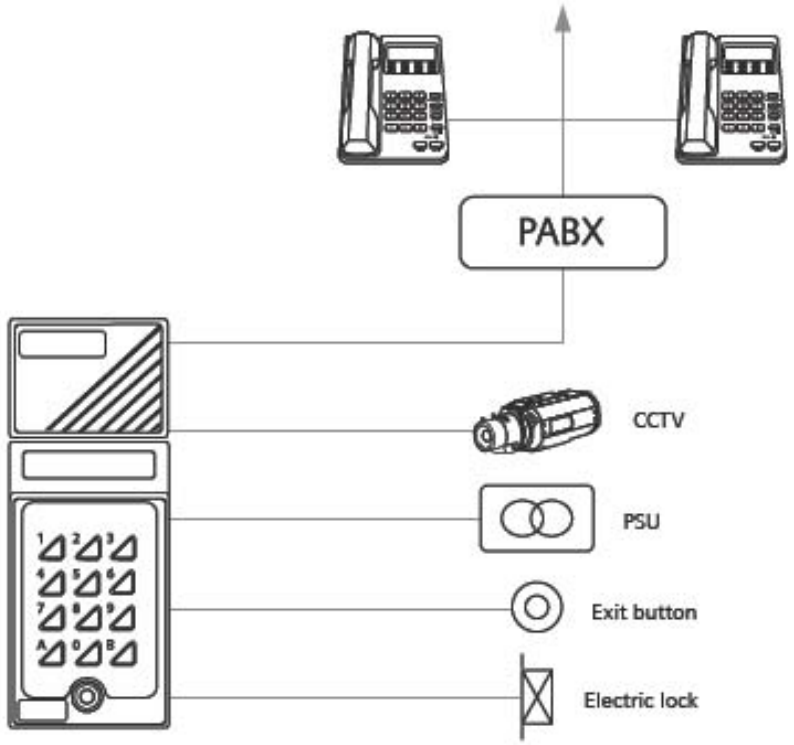
- Very robust design
- Easy to install (minimal wiring)
- Ability to trigger CCTV recordings
- Cost-efficiency
- Unlimited number of extensions

Door entry phone for organizations with PABX

SiPass Bewacom –
How it works

SIEMENS

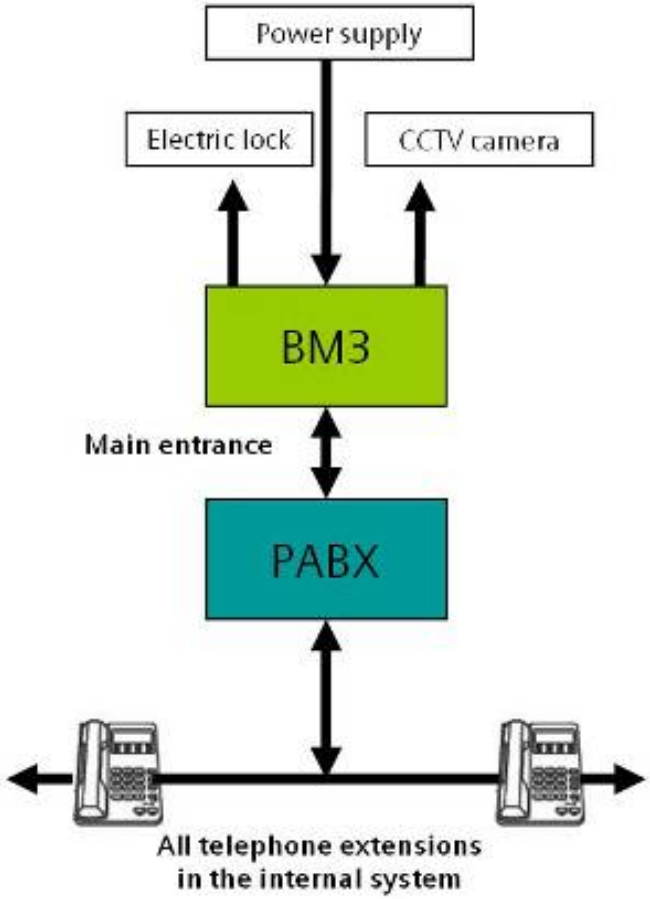
- SiPass Bewacom connects to a company's existing PABX internal telephone system in just the same way as any other extension in the internal network.
- As a result, the main entrance door can be unlocked via any of the telephone extensions that are connected to the company's internal telephone system.
- Installation is fast and easy with minimal cabling required.



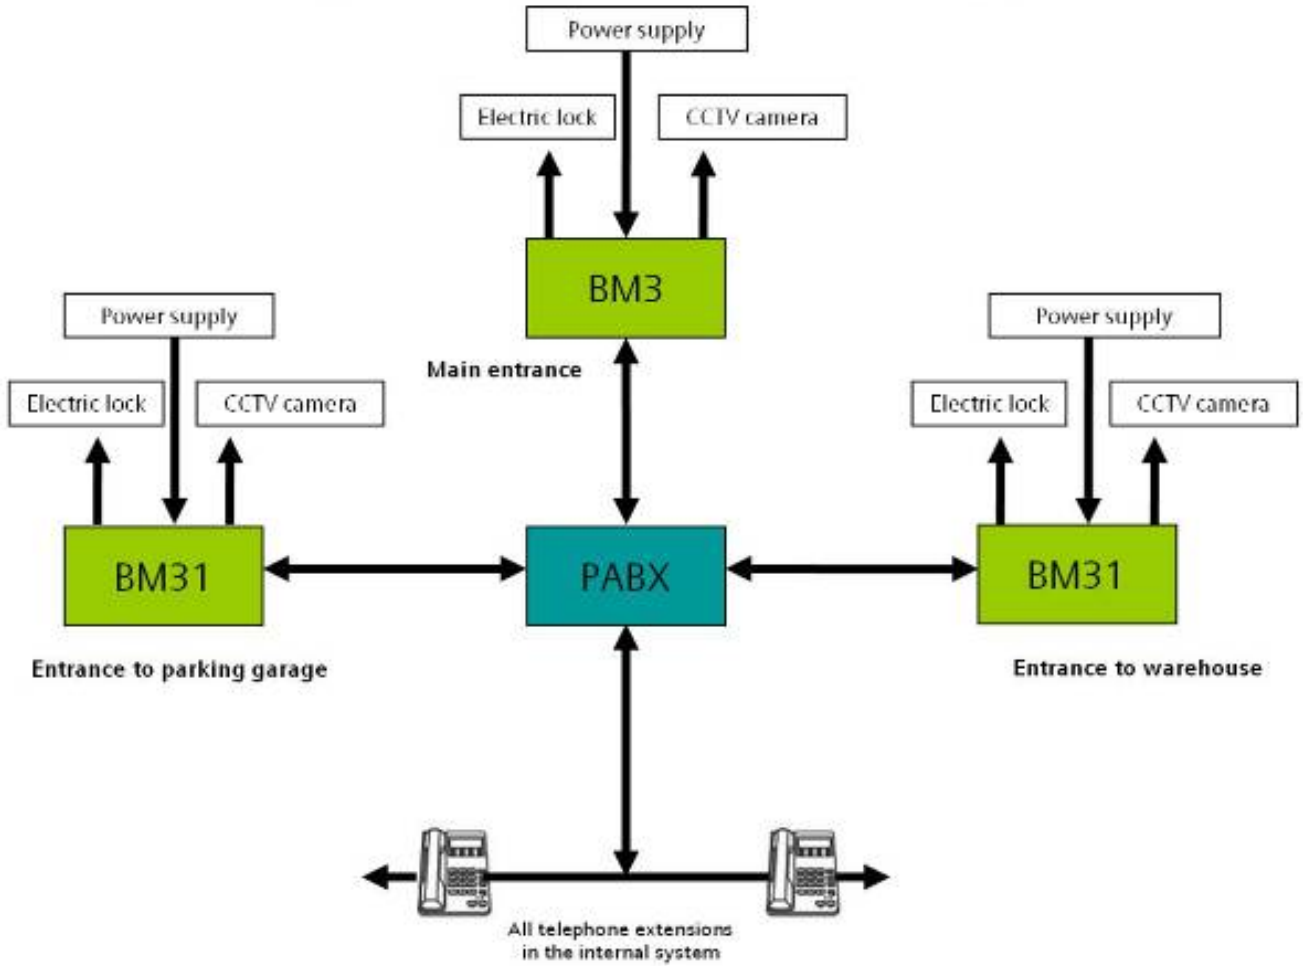
SiPass Bewacom –
Application examples

SIEMENS

- The most common application is an office building that installs a BM3 or BM31 outside its main entrance door
- Another option is to install Bewacom devices at multiple locations: at the main entrance, at the loading dock, at the entrance to the underground parking area, etc.



SiPass Bewacom –
Multi-door application example



SiPass Door Entry Phones –
Integration with video surveillance

SIEMENS

- Both SiPass Bewatel and SiPass Bewacom have an output for camera control.
- Either system can trigger a camera to start filming as soon as a visitor pushes a call button on the door entry phone, for example.
- Camera output can be viewed on a connected monitor directly by the person who picks up the call.
- Alternatively, the recording can simply be saved in the video surveillance log and viewed later, if required.

SiPass Door Entry Phones –
Review of Highlights

- Convenient and secure
- Cost efficient
- Fast and easy installation
- Robust and reliable design
- Easy to use and maintain
- Integrated codelock
- Output for camera control
- Ideal both for organizations that have an access control system, and for those that don't!
