

ASE5300-GP

SiPass®
integrated

Graphics

-
- Easy creation of graphic maps
 - Performing routine task by mouse click
 - Comprehensive symbols library
 - Support of more than 30 different graphic file types incl. Auto-CAD files

The operation of an access control and security application should be as easy and uncomplicated as possible.

By providing security operators with a method of visually monitoring the status of a room, a building or an entire facility and the ability to perform routine tasks with a single click of the mouse button, it is ensured that security conditions can be dealt with efficiently. SiPass provides this efficiency through its advanced graphics option.

Description

The SiPass graphics option allows you to design, import, and construct custom graphic maps. These maps are then used by security operators to visually handle alarm conditions, and continually monitor the status of any point within your access control and security system.

Graphic maps are integrated with the SiPass monitoring system. This ensures that when the status of any component at your facility changes, it is dynamically represented by a symbol on a graphic map. This dynamic updating of symbols, alerts the security operator to a change of condition, allowing them to respond with an appropriate and timely action.

The comprehensive suite of graphics tools provided by SiPass, allow any facility to easily create their own graphic maps. Within minutes you can construct a map including a full layout of your facility, dynamically changing symbols that represent points within your system, and shortcuts to other maps or frequently used functions.

Features

- Complete integrated suite of graphic design tools
- Comprehensive symbols library
- Support for importing more than 30 different graphic file types
- Support for AutoCAD files
- Ability to define and design your own dynamic symbols
- Dynamically updating maps that represent the condition of the system
- Ability to include shortcut buttons to other graphic maps
- CCTV actions directly from maps
- Display of an appropriate map in response to alarm conditions
- Display of AVIs and moving graphics within a map
- Buttons to perform frequent routines

Benefits

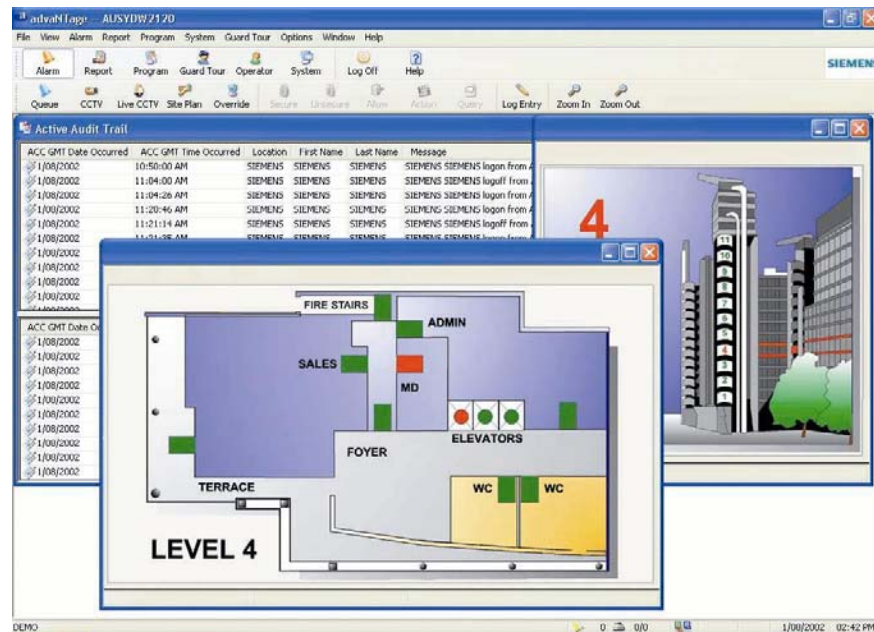

SiPass makes it easy to design and create your own intuitive graphic maps in just minutes. Using the integrated suite of graphic design tools, a map can be quickly designed that displays the facility layout and all components of your security system.

The powerful import utility allows you to import existing drawings of your facility that were created using other dedicated drawing packages. This means that if you have a drawing of your facility in AutoCAD, with only a few mouse clicks you can import it into SiPass and use it as the basis for your graphic map.

The flexibility provided by the graphics option allows you to control any aspect of your facility directly from a map. With only a click of the mouse you can effortlessly perform the following tasks:

- Unlock and lock doors remotely
- Switch to maps depicting other areas of your facility
- Display detailed information regarding the configuration and status of a system point
- Display CCTV patterns and sequences
- Trigger other events within the system
- Handle alarm conditions

Monitoring the activity at your site is also easily performed using a graphic map. The status of each point in your system can be clearly displayed on a map, and when the state of the point changes, the symbol representing it dynamically updates alerting the security operator immediately of its condition.

System Requirements

One of the following core packages is required:

Type	Part no	Designation
ASL5000-SE	6FL7820-8AA10	SiPass Standard Edition
ASL5000-OA	6FL7820-8AA20	SiPass Optima

Details for ordering

Type	Part no	Designation
ASE5300-GP	6FL7820-8AE17	SiPass Graphics
