

SiPass Access
Control System

SiPass™ High Level Elevator Management (Toshiba)

-
- **High Level Access Control and Security for Facilities with Toshiba Elevators**
 - **Complete Integration with Elevator Management Systems**

The SiPass High Level Interface allows you to have total control over access to building floors from SiPass while utilizing a High Level Elevator Management System to handle the mechanics of floor activation and de-activation.

Configuring Access Control for an elevator system is a completely transparent process. SiPass simply extends the same concepts governing door access control to floors, using a consistent and intuitive Graphical User Interface.

Features

- Access control for up to 255 floors
- Unique time schedules can be assigned to each floor
- Bank and Elevator Creation Wizards simplify configuration

Benefits

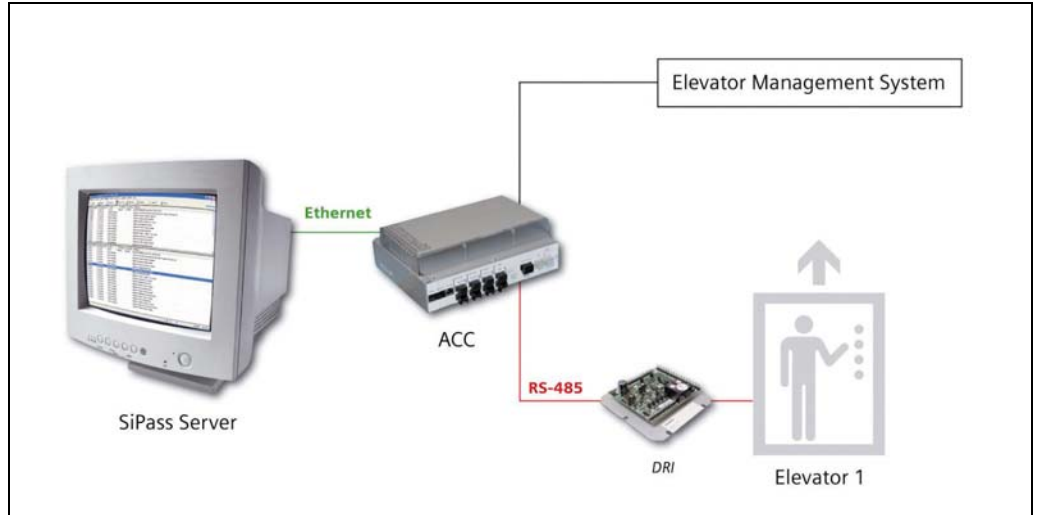

Because the Advanced Central Controller also functions as a fully programmable Elevator Controller, there is no need to purchase expensive additional hardware.

Each floor is treated like any other entry point in SiPass, with associated access control options including: time during which access is possible, Daily Code access, PIN assignment and even Image Verification for complete security.

In addition, floors and even entire floor groups can be disabled with one mouse click. The time permitted to select a floor after a valid card badge is configurable.

The SiPass Graphical User Interface uses Creation Wizards to simplify the laborious process of defining Elevator Access Control components and settings.

Architecture

High Level Elevator Access Control Architecture

System Requirements

Required for the operation of SiPass High Level Elevator Interface is one of the following core packages:

Part no.	Description
6FL7820-8AA10	SiPass Standard Edition ¹
6FL7820-8AA20	SiPass Optima ¹

Supported Elevator System

Toshiba	Elevator Management System
---------	----------------------------

Details for ordering

Part no.	Description
6FL7820-8AE06	SiPass High Level Elevator Management (Toshiba)

¹ Requires SiPass MP2.1
